PROFESSIONAL SUMMARY

Data Science & AI undergraduate at IIT Guwahati who builds practical AI and backend systems with Python, FastAPI, LangChain, LangGraph, PostgreSQL, and Redis. My projects include production-deployed applications with API integration, AI workflows, caching, rate limiting, database persistence, and performance benchmarking. Seeking an internship where I can contribute to real software projects and strengthen my engineering skills.

TECHNICAL SKILLS

Languages: Python, SQL

AI & LLM: LangChain, LangGraph, LLM Applications, RAG, Structured Output

Backend: FastAPI, Flask, REST APIs, Async Python

Databases & Caching: PostgreSQL, SQLAlchemy, Redis, Alembic

Tools & Deployment: Docker, Git, GitHub, Postman, Cursor, Antigravity, Neon, Upstash, Render, Vercel

TECHNICAL PROJECTS

PII Compliance Gateway – AI-Powered PII Detection & Sanitization | [GitHub](#) | [Live Demo](#) Jul 2026 – Present

FastAPI, LangChain, LangGraph, Redis, PostgreSQL, Docker, Render, Vercel, Neon, Upstash

- Built and deployed an AI-powered PII detection gateway using FastAPI, LangChain, and LangGraph, with Pydantic structured output and deterministic Python sanitization to identify sensitive entities and return sanitized text through a REST API.
- Deployed the FastAPI backend on Render with a Next.js frontend on Vercel, using PostgreSQL on Neon for privacy-conscious audit logging and Upstash Redis for caching and atomic IP rate limiting with SHA-256 cache keys and a 50 requests per IP per 60 seconds limit.
- Benchmarked cold and Redis-cached scan latency across 20 iterations, recording 14.57 s average cold-path latency versus 10.41 ms for cached requests, demonstrating the latency difference between uncached and cached requests.

VizoSyn – Skill-Based Teammate Matchmaking Platform | [GitHub](#) | [Live Demo](#) Feb 2026 – Mar 2026

FastAPI, PostgreSQL, SQLAlchemy, REST APIs, Render, Vercel, Neon

- Built and maintained 15+ RESTful API endpoints with FastAPI to support teammate discovery and skill-based user workflows.
- Designed PostgreSQL schemas and data models using SQLAlchemy ORM, implementing profile filtering and query optimization for complex user data.
- Deployed the backend on Render with a Neon PostgreSQL database and organized the application into modular routes, schemas, and models for maintainable development.

CERTIFICATIONS & ACHIEVEMENTS

Deloitte Australia Technology Job Simulation – Forage | [Credential](#) Sep 2026

- Completed a job simulation involving development and coding.
- Wrote a proposal for creating a dashboard.

EDUCATION

Bachelor of Science (Hons.) in Data Science & AI 2025 – 2029

Indian Institute of Technology Guwahati
